

**Xceptor® Data Hub is a business rule-driven data management, validation and enrichment system. In common with all other Xceptor® Solutions, it is easy to deploy, cost-effective and flexible.**

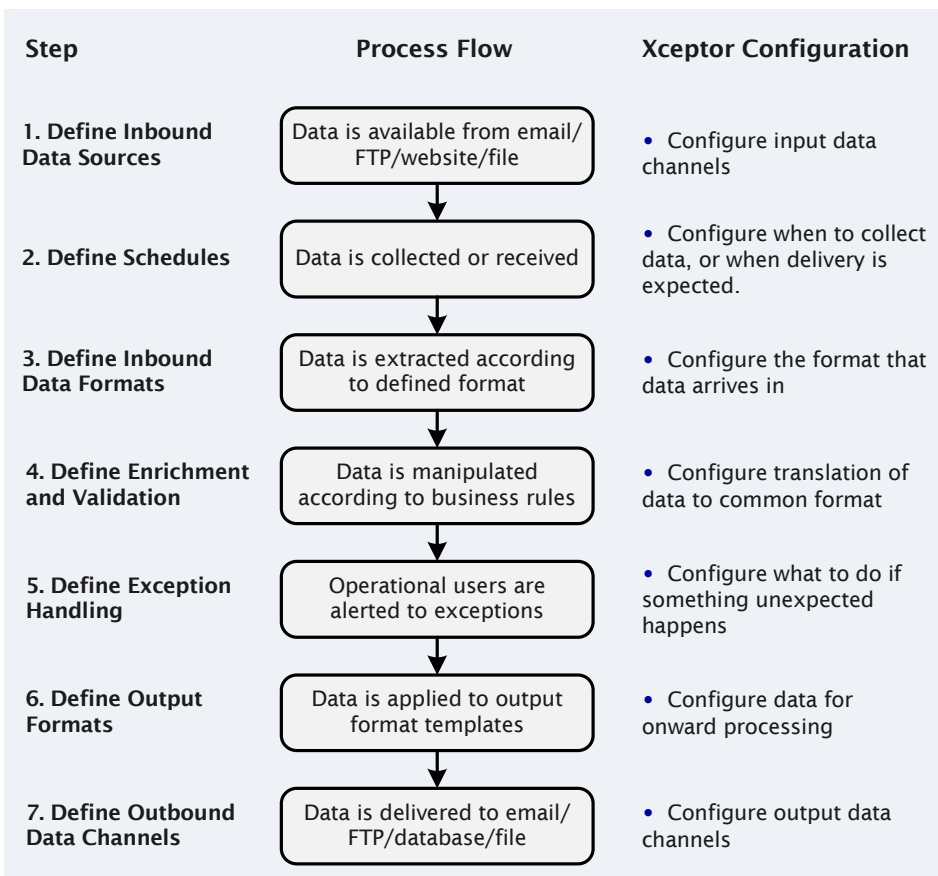

**The Xceptor® Product Suite**

Xceptor® Data Hub is an integrated member of the Xceptor® suite of web service products. By making use of the data services, exception management, scheduling and user profiling building blocks, Xceptor® Data Hub delivers flexible, integrated and high-performance data management facilities.

**Xceptor® Data Hub**

Xceptor® delivers the following outcomes:

- Eliminates the cost and inaccuracy of rekeying and cut-and-paste activities commonly associated with data entering the organisation.
- Delivers a high level of flexibility without the need for technical involvement. Operational users configure rules to process their data.
- Reduces of costs associated with support and maintenance of proprietary interfaces.
- Provides the ability to react quickly to changing and new data format types.

**Scheduling**

- Daily, weekly, monthly and annual schedules
- Allows definition of expected arrival time for email/FTP/file-based data

**Data Format Handling**

- Excel, CSV/other delimited, fixed-width, XML, PDF, Unired
- Custom plug-in support for all other formats

**Enrichment and Validation**

- Support for user defined business rules for validation, transformation ,enrichment
- Straightforward definition of custom enrichment functions

**Productivity Aids**

- All configuration items auto-documenting
- Comprehensive test facility covering all configuration stages
- Extensive audit and exception logging
- Team-based user profiling

**Exception Handling**

- Supports user defined exception handling processes
- Exception notification via email alerts

**Output Formatting**

- Excel, CSV/other delimited, fixed-width, XML, PDF and custom

**Product Benefits**

Xceptor® Data Hub addresses ongoing and ad-hoc data management requirements of banks and financial organisations, placing business users in control of the rules that affect their business operations. Xceptor® provides the following benefits:

- Business users drive the definition of source data formats, validation, enrichment, reference data, output formatting and exception management processes. Users control the rules that drive business efficiency.
- Xceptor® can accept data in any format, removing a major challenge when integrating new applications.
- All access is browser-based, eliminating software deployment and compatibility issues.
- Information can be made available to clients, partners and other stakeholders.
- Xceptor® delivers flexible data management functionality, coupled with customisable reporting and output formats, making it highly adaptable to your business requirements.
- Through our flexible licensing structure and low-impact implementation approach, Xceptor® has a low total cost of ownership.

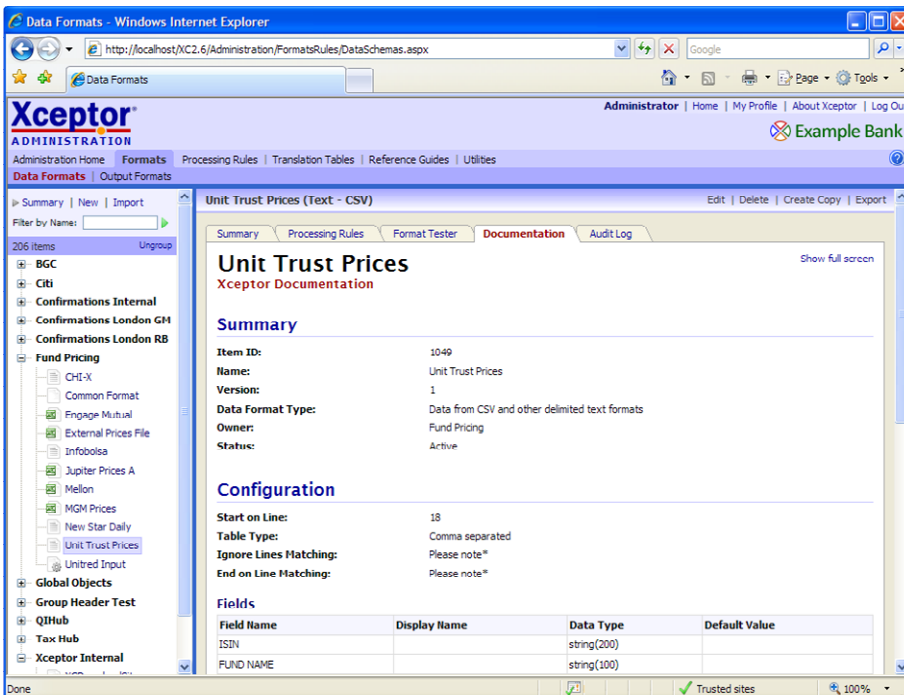

**About Us**

Web Services Integration Ltd specialises in the requirements of the International Banking Community.

Our market leading product, Xceptor®, is used by major organisations to solve the perennial issues of data management, reconciliation, matching and operational tax. What sets us apart is our ability to harness technology and deliver solutions that put you in control.

Our technology is different, as is the way we do business.
