

Web Services Integration is a specialist software house providing advanced solutions to the financial services community. Our product family, Xceptor®, is combined with a thorough understanding of what clients are striving to achieve. Xceptor® is an integrated set of business rule-driven solutions, specifically designed to be easy to deploy, cost-effective and flexible.

The Xceptor® Product Suite

The Xceptor® Product Suite has been specifically developed to assist financial institutions in revolutionising the way they approach complex business issues. Xceptor® covers a wide and constantly growing range of business areas, including data management, reconciliation, withholding tax reclamation, and compliance with the European Union Savings Directive.

Business Challenges

We have identified common challenges faced by financial institutions in today's competitive market:

- Customers of these institutions are demanding ever higher levels of service.
- Increasing regulatory pressures.
- Reduction in customer loyalty and inertia.
- Demands for greater back-office efficiency and reduced costs.
- Requirements to support a more flexible workforce.
- Pressure to launch and withdraw products in shorter timescales.

Web Services Integration will help your organisation overcome these challenges.

Solution Requirements

Organisations require solutions which achieve the following outcomes:

- A sound base for new or modified services to be targeted at lucrative market segments.
- A reduction in manual processes.
- Intuitive and easy to use, maximising workforce efficiency and flexibility.
- Improved access to information across the organisation.
- Straightforward and rapid integration with existing processes and systems.

The Xceptor® Product Suite will help your organisation achieve these outcomes.

Architecture

The Xceptor® Product Suite consists of common building blocks, covering standard activities: security and user profiling, reporting, reference data management, activity scheduling and audit.

These building blocks provide the basis for solutions which address specific business requirements.

Product Features

- Data management facilities that integrate seamlessly with any existing architecture.
- Accepts and delivers data in any format by any mechanism.
- Supports multi-site, multi-team based activity.
- Dashboard-based access delivers information to each user based on their profile, real-time.
- Fully browser based.
- Integrated use of document management.
- Fully featured notification management for handling exceptions.
- Scheduler facility for automating tasks.
- User configurable enquiries and reports.
- Extensive audit trail including logging all user actions.
- Tuning facilities to aid performance management.

Xceptor® Benefits

The design of Xceptor® and the technology it employs means that it is highly flexible, solving a wide variety of business problems. Whether the requirement is replacement of an old central system which has become inappropriate for supporting strategic objectives or a niche deployment, Xceptor® can deliver business benefit to exceed your expectation:

- Addresses security and audit requirements fully and seamlessly.
- A flexible data management approach means minimal impact on existing systems and rapid deployment.
- Data validation, enrichment and reporting formats are configured without any programming effort and where appropriate can be managed by users.
- Automates common processes and high volume tasks to maximise automated throughput.
- Hub-based architecture allows you to centralise or decentralise operations based on your business requirement.
- Full web service architecture significantly reduces software deployment and compatibility costs and issues.
- Scalable to accommodate rapid increases or changes in business volume.
- Full service support provision, be it the ongoing distribution of reference data and rule updates or assistance with business rule configuration.
- Through our flexible licensing structure and effective implementation approach, Xceptor® has a low cost of ownership.

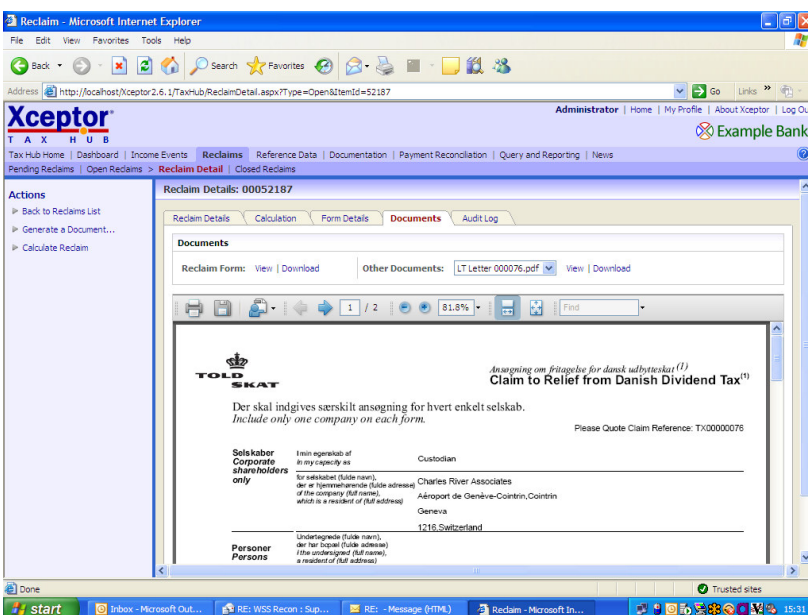

About Us

Web Services Integration Ltd specialises in the requirements of the International Banking Community.

Our market leading product, Xceptor®, is used by major organisations to solve the perennial issues of data management, reconciliation, matching and operational tax. What sets us apart is our ability to harness technology and deliver solutions that put you in control.

Our technology is different, as is the way we do business.
